DETAILED ACTION

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance: A thorough search of the prior art failed to yield any viable results on the limitation "determining whether the scanned image is ready for capture based on an expected number of prints detected ... and the quality of the print images determined...". Viable results were found with regard to determining to capture the prints based on the quality of the print images, that is one of the primary reasons for the post-scan, pre-capture analysis, but nothing of relevance could be found with regards to the number of prints present affecting the determination of whether or not to capture the scanned prints. The closest prior art found as a result of the afore mentioned search is as follows. Lo (U.S. Publication Number 2007/0014440) discloses a system and method which scans and captures and then determines as part of the quality check whether or not the appropriate number of prints are present, or whether some prints have been duplicated, swapped, or whether or not a person is an amputee based on the comparison of their individual prints to their slap print. If an error is discovered then the prints are not enrolled in the system and a new scan and capture is done. Lo specifically discloses analyzing the prints post-capture and there is no obvious reason to modify Lo. The other prior art that is considered to be pertinent is Ohba (U.S. Patent Number 7,174,036) which discloses acquiring fingerprints in a specific sequence but does not determine whether or not to capture the fingerprints based on how many fingerprints were detected. It is for these reasons that the case is considered to be in condition for allowance.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
